DETAILED ACTION

Restrictions

This Office Action is in response to applicant's election filed on January 30, 2006.

Claims 22-24 have been cancelled. Claims 31-33 are newly added.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8 and 25-30, drawn to a female condom, classified in class 128, subclass 830.
- II. Claims 9-21 and 31-33, drawn to a female condom, classified in class 128, subclass 830.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claims 1 and 25 do not require the particulars of the subcombination to the extent set forth in claims 9, 16, and 31. The subcombination has separate utility such as the device requires a retainer for attachment to the open end of the pouch providing support to the opening into the pouch.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper. With regard to the different field of search, although groups if

Art Unit: 3743

inventions are classified in the same general area, the distinctiveness between these groups would require two searches instead of one. For instance, the Examiner would need to search for group I with limitations of a pouch and a retainer in the form of a sponge and then another search for Group II with limitations of a pouch, a retainer, and a frame. Two different searches are a serious burden on the Examiner and therefore restriction for examination is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
